Carmeuse Lime & Stone provides training on laboratory testing

In the month of May, the Carmeuse Lime & Stone Company was very pleased to have conducted its first educational program on *Laboratory Testing Procedures for Lime Treated Soil*. The one-day session was conducted at its Technology Center in Pittsburgh, PA.

Intended primarily for geotechnical testing laboratory managers and senior technicians, the classroom and lab program offered hands-on training on key ASTM procedures and the National Lime Association's mixture design procedures for lime stabilized soil. Carmeuse also provided some practical tips, equipment hints and advice on how to avoid common mistakes when running the gamut of lime-soil testing procedures. The class was limited to a maximum of 12 participants allowing for quality interaction and plenty of time to focus on key points and questions.

Carmeuse plans to conduct another session later this year or in early 2010. Interested participants are encouraged to contact Larry Cole by phone or e-mail as provided above.

Carmeuse Lime & Stone is dedicated to excellence in providing high quality lime and limestone products for industrial applications in steel manufacturing, power generating utility plants, road construction and land development, and water and waste water treatment. Staffed by over 2,400 professionals, Carmeuse has 35 plants that supply and serve most of the USA and Eastern Canada.
